FEATURE SLEUTHS

Visionary Event by RUAS AI Club

Welcome to Feature Sleuth, a high-pressure data engineering showdown where the dataset takes center stage and the model is fixed. In a controlled lab setup, participants must craft powerful feature pipelines under strict time limits—going beyond basic cleaning to master scaling, encoding, dimensionality reduction, and advanced feature creation. With no AutoML or model tuning allowed, this event is the ultimate test of intuition, creativity, and technical execution in feature engineering.

INSTRUCTIONS:

- **Open to all students**
- **Participate solo or in teams of up to 3.**
- **Only the feature processing pipeline may be submitted; the prediction model is fixed and cannot be altered.**
- **Use of external datasets or internet resources for code assistance is strictly prohibited.**
- **Personal electronic devices (laptops, mobile phones, smartwatches, etc.) are not allowed inside the event venue.**
- **Final submission must be a runnable script or notebook (.py or .ipynb) that outputs the processed dataset.**

Submissions will be evaluated based on predictive accuracy, efficiency of the pipeline, and the originality of engineered features, with emphasis on both technical execution and innovative problem-solving.

This is the ultimate test of your data intuition and technical execution. No auto-ML, no model tuning—just pure, unadulterated feature engineering.
